Note : - The maximum design pressure is the value including the water hammer pressure.

Be careful that maximum design pressure is not exceeded during use.

- The diaphragm may become loose due to temperature changes during long storage, operation stop or while in use. Check the conditions and then retighten the bolts and nuts between the bonnet and the body to the "bonnet tightening torque". (Failure to do so may cause fluid leakage.)

Locking Device

Operating Procedure

- Do not exert excessive force in turning the handle. (It can be deformed, or destroyed.)
- Please lock using a padlock for miss operation prevention.
- The valve is simple locked at the time of shipment.
- Please operate valve after release simple lock.
- Do not disassemble the LOCKING DEVICE. (Injury may occur.)

- 1- Push the release lever with the locking hole to release the simple lock.
- 2- Operate the valve to the desired valve lift.
- 3- Push the lock lever without the locking hole to lock the simple lock.
- 4- The location hole for the lock is already installed in the handle. Please lock using padlock as necessary. (Refer to Table 1 for the size of lock.)
